Deeply Qualify with 2-Stage Assessments

Honey keeps patients engaged with flexible self-assessments embedded directly on your study website. These assessments are designed to prevent drop-off with user-friendly, protocol-specific questionnaires. **All patient data is automatically imported into Honey.**

Phone assessments are conducted by licensed medical professionals to ensure **only qualified patients** are referred to your sites. Our team **disqualifies** approximately **75%** of web submissions, so your sites only receive the most suitable candidates.

Keep Disqualified Patients Ready to Enroll in Future Trials

Honey's Registry is not a typical database. It is a build-it-yourself sponsor-specific temporary staging environment that engages patients who have expressed interest in one of your studies and keeps them ready to enroll for potential re-matching into your future trials.

Provide One Place for Sites to Pre-Screen & Enroll

Honey allows sites to streamline administrative tasks with a single log-in and intuitive user experience. Sites receive trusted, prequalified referrals with full candidate profiles and notes from the previous assessments – and can connect with patients directly in the platform with email, SMS, WhatsApp, VOIP calling, and video.
