

TRIALBEE HELPS AN ULCERATIVE COLITIS STUDY TO GET BACK ON TRACK WITH RECRUITMENT SUPPORT IN 4 COUNTRIES

Trialbee's Smart Patient Matching saves 2 months in recruitment efforts

Challenge

A global biotech initiated a Phase IIb study for the treatment of ulcerative colitis.

Study protocol originally accounted for randomizing 120 patients across 22 investigator sites in Canada, Czech Republic, Denmark and the UK. Full enrollment was expected after 12 months of campaigning.

However, as sites failed to enroll enough patients the sponsor was compelled to extend the enrollment timeline from 12 to 18 months and increase the study budget.

Solution

Trialbee partnered with the sponsor to close the enrollment gap and move the study forward as planned.

Highly-targeted patients from the public domain that were a good match for this study were identified in four countries using real-time analytics driven by Trialbee's Smart Patient Matching solution. Patients who qualified via an online questionnaire were subsequently screened via telephone by a professionally trained, multilingual nurse panel to ensure each respective patient was indeed a high-quality referral suitable for trial enrollment.

Study overview

- Phase IIb study for ulcerative colitis
- 22 investigator sites across 4 countries
- 120 patient-randomization target

Outcome

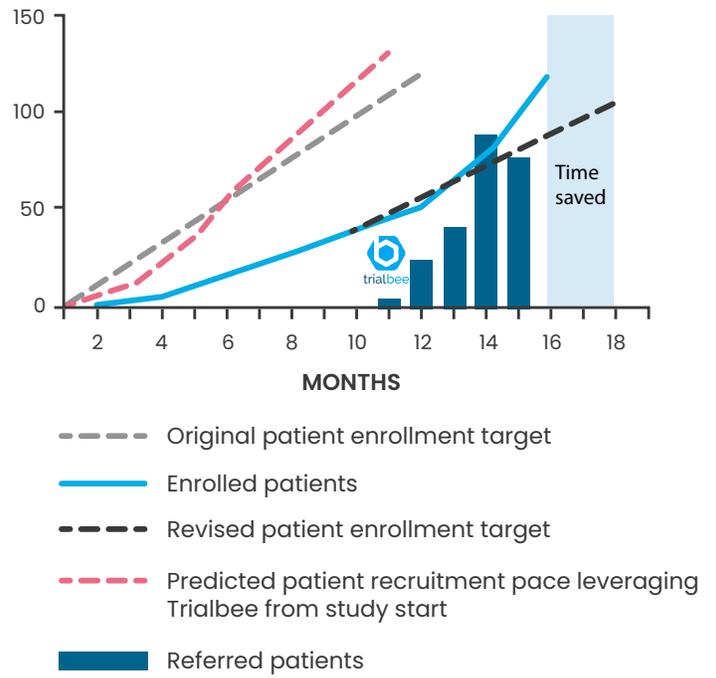

- Got study back on track
- Saved 2 months of recruitment efforts
- Enrollment gap of 48 patients closed efficiently and cost-effectively

Outcomes

In just five months, Trialbee quickly made up for the site's low enrollment rates by contributing highly qualified patients and helped the sponsor meet target enrollment within a total of 16 months - 2 months earlier than expected resulting in time and budget savings.

Given Trialbee's pace of recruitment and ability to engage patients in 4 different countries, leveraging Trialbee at the start of the study would have further bent the time and cost curve to bring the trial to early completion within budget.

Additionally, site burden was reduced through the e-screening of referred patients. Only highly-qualified patients were referred and activated at each site, freeing site staff to focus on mission-critical tasks and enabling a superior experience for sites and patients by utilizing Trialbee.
